

# faytech's modular Touch Monitors & PCs

Dear Customer,

Customized touch devices can be a time-consuming and costly endeavour for any company.

faytech announced the launch of a line of products to solve these issues, speed up deployments and bring down costs while providing their customers with high quality, made to spec products they require.

faytech's game changing front and back kit concept allows you to choose from a wide range of front kits (touch displays) and back kits (PCs) to find the perfectly matched combination that best suited for any particular deployment you might have.

Now customized project scenarios can be realized quickly, cost-effectively, and exactly to spec.

Simplicity of design and interchangeability between different front and back kit configurations provides you the freedom to choose from various display sizes and PC variants from 7" to 32" with virtually unlimited I/O board configurations, from Intel's Elkhart Lake (x6413E, x6211E, J6412) and Tiger Lake U (i5-145G7E, i3-1115G4E, i7-1185G7E), to Amlogic (A311D, S905D3).

With various OS, storage and RAM options our modular front and back kits will fit any need.

With over two million custom combinations, virtual off the shelf tailor-made touch PC monitors are literally at your fingertips.

Modular Front Kit & Black Kit Solutions

Introducing our Intel®-based Modular Touch PCs

Looking forward to hearing from you!
